

FTDI USB

FTDI USB

This module provides users with alternatives of module power supply. Three solder joints in the diagram below, the bottom one is for 5V, upper one for 3.3 V. Users can choose power supply according to corresponding USB's power supply voltage. Just weld it on with soldering iron. USB to serial port can be used together with Arduino mini. Plug Arduino mini to corresponding pins of the convert module, you can then upload arduino program to Arduino mini.
