

## HX711 Dual-channel WA

HX711 Dual-channel WA

This module adopts HX711 4-bit high precision A/D converter chip, a chip specially designed for high precision electronic scale. It has two analog input channels. Internal is integrated with 128 times programmable gain amplifier. Input circuit can be configured to bridge type (such as pressure, weighing) sensor mode. It is an ideal, high precision, low cost, front-end sampling module;
